Requirements: Project (10%), Final (30%), Homework (30%), Two midterms (30%).

Reading: Rice, *Mathematical Statistics and Data Analysis*, 2nd ed.

Instructor: Just under one third of respondents rate Dr. Steve C. Wang excellent. An equal number note that his lectures are interesting, and a few laud their clarity. One sixth find the audio-visual portion of lectures particularly engaging. This year, Professor Arthur P. Dempster assumes teaching responsibilities for this course.

Sections: Just over one third of those polled find sections useful. One sixth, however, complain that they are not helpful.

Reading: One fourth of surveyed students complain that the book is not helpful. An equal number gripe that it is poorly-integrated. Just over one fifth state that it is poor.

Requirements: Just over one-third of pollees note that written assignments are appropriate to the course, and an equal number comment that they are helpful. Several appreciate their prompt return. One sixth, however, wish that solution sets were available.

Preparation: Five sixths of respondents believe that Statistics 110 is appropriate preparation for this course.

• Enrollment in Statistics 111 is advocated by just over three fifths of respondents. Just over one fifth praise the quality of the teaching. An equal number, however, give the course a conditional recommendation.

Statistics 139.

Regression Analysis

Steve C. Wang

Half Course

To be given Fall Term

Official Course Description: Statistics 139 introduces the linear models and associated computational and statistical inference techniques that use empirical data to predict "response" variables from a variety of "independent" variables such as "background" or experimentally "controlled" variables. The course examines sketches of a range of extensions to the basic theory, including hierarchical models with random effects, nonlinear regression models, models for counted data, and models for phenomena tracked through time.
