

Review of Ordinary and Hyperbolic Sines and Cosines

Cosine (cos) Sine (sine)	Hyperbolic Cosine (cosh) Hyperbolic Sine (sinh)
 <p style="text-align: center;">$x^2 + y^2 = 1$ (circle)</p>	 <p style="text-align: center;">$x^2 - y^2 = 1$ (hyperbola)</p>
<p>Construct a sector as shown with a vertex at the point (x, y) and area $\frac{1}{2}u$. Then by definition:</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;"> $\begin{aligned} \cos u &= x, \\ \sin u &= y. \end{aligned}$ </div> <p>(Since u equals the radian measure of the central angle, we can think of \sin and \cos as functions of angles. Note that u also equals the length of the bounding arc.)</p>	<p>Construct a sector as shown with a vertex at the point (x, y) and area $\frac{1}{2}u$. Then by definition:</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;"> $\begin{aligned} \cosh u &= x, \\ \sinh u &= y. \end{aligned}$ </div> <p>(Note that u does not equal the arc length or the central angle.)</p>
$\cos^2 u + \sin^2 u = 1$	$\cosh^2 u - \sinh^2 u = 1$
	
<p>$\cos u, \sin u$ are bounded, and both are periodic with period 2π.</p>	<p>$\cosh u \geq 1$ for all u; min at $u=0$; unbounded above. \sinh is a bijection from \mathbb{R} to \mathbb{R}, and is increasing.</p>
<p>\cos is even: $\cos u = \cos(-u)$. \sin is odd: $\sin u = \sin(-u)$.</p>	<p>\cosh is even: $\cosh u = \cosh(-u)$. \sinh is odd: $\sinh u = \sinh(-u)$.</p>
$\cos u = \frac{e^{iu} + e^{-iu}}{2} \quad \sin u = \frac{e^{iu} - e^{-iu}}{2}$	$\cosh u = \frac{e^u + e^{-u}}{2} \quad \sinh u = \frac{e^u - e^{-u}}{2}$
$\frac{d}{du} \cos u = -\sin u \quad \frac{d}{du} \sin u = +\cos u$	$\frac{d}{du} \cosh u = +\sinh u \quad \frac{d}{du} \sinh u = +\cosh u$
<p>The functions $z = \cos u, z = \sin u$ are a basis for the solutions of the differential equation $z'' = -z$. (There are other bases.)</p>	<p>The functions $z = \cosh u, z = \sinh u$ are a basis for the solutions of the differential equation $z'' = +z$. (There are other bases, such as e^u, e^{-u}.)</p>
