

Homage to a Polygon

Josef Albers was German artist who loved using geometric shapes. Using a computer follow the link to a painting of his. This painting is called "Homage to a Square." A homage is like a tribute - so you can think of this painting as a tribute to the square.

Make your own "Homage to a _____." Pick a polygon that you want to use. Then use congruent and similar shapes to create a painting in construction paper. Then write a paragraph telling what polygon you used, and whether you used similar, congruent shapes, or both.
