

Hi!

I'm a biology alum (class of 2006) currently working as a staff scientist/lab manager in a research lab at Children's Hospital of Philadelphia.

I just wanted to reach out in case there were any soon to be graduates that might be interested in a lab tech job working on mitochondrial research, and specifically, doing a lot of mouse work (handling, breeding, genotyping, dissection.. etc). I'd be happy to talk to any interested students directly, and then connect them with other people in my lab. Previously I've had two swat alums (**Lia D'Alessandro '21** and **Wendy Tan '19**) and they seemed to like it pretty well.

The job listing isn't posted yet, but it will be soon, and we would be looking to have them start as soon as they graduated.

Thanks very much!  
Katy
