Subject: Swat Alum: Open Position at Broad Institute Bacterial Genomics Lab

Hello!

My name is Veda Khadka, and I graduated Swat Bio in 2016. After graduating with my PhD in microbiology from MIT two years ago, I am currently a postdoc in [bacterial genomics](#) at the [Broad Institute](#) (in Cambridge, MA), where our group is hiring a new computational research associate. I was wondering if you'd be able to forward our job listing on to a department bulletin and / or any students you know who may be interested? This is a really great opportunity to take on an independent research project in preparation for grad school and/or work in the biotech industry. Many lab alumni have gone on to PhD programs at Stanford, Yale, and Brown.

We're looking for a recent graduate with an interest in genomics, microbiology, or research in general to come work with us! The candidate would apply through Broad's umbrella portal [here](#) and would be directed to our group. I'm more than happy to chat with anyone interested (you can pass along my email information).

Thank you!

Veda
