I am planning on developing a small wind turbine on the roof of Hicks. I am planning on having Professor McGarity advise the project, but will likely consult with Professors Macken, Everbach, and Orthlieb. I have yet to discuss it with Professor Everbach, but possible designs for the wind turbine may include derivatives of the water turbine that he is working to develop. The wind turbine potentially would be integrated into the course material of E35 Solar Energy Systems taught by Professor McGarity.
