E90 Topic Memo: A Control Theory Demonstrator

Advisor: Erik Cheever

Since I'll be doing a directed reading with Prof Cheever in the subject of Control Theory, I thought it would make sense for me to do an E90 project in the same area. I would like to make some interesting labs for future E58 classes. Although most of my training is in the electrical realm, I would like to make mechanical device that if properly controlled balanced inherently unstable systems.
