Kaori Kitao Lecture

## The Shape of Nature: *Bees, Trees, Origami*

**Satyan Devadoss**  
Williams College

The renaissance was a time when art and science were not polar opposites, but extensions of one another. The advent of the enlightenment era, however, introduced a dualistic tension between the visual arts and scientific research. Today, the study of nature is serving as a bridge between these worlds once again. Heavily infused with imagery, we look at wonderful examples at the intersection of art, visualization, and research mathematics.

TUESDAY, FEBRUARY 25

SCIENCE CENTER 199

Refreshments 4:15

Talk 4:30

**DEPARTMENT OF MATHEMATICS AND STATISTICS • SWARTHMORE COLLEGE**
