Neuroscience Special Major

Frank Durgin
Psychology

PLEASE SIGN IN HERE TO RECEIVE MORE INFORMATION
Neuroscience Faculty Advisor for Sophomore Planning

Frank Durgin (fdurgin1) Professor of Psychology

With excellent support from:

Kim Hoang (khoang1): PSYC Academic Adv.
Why study Neuroscience?

• Inherent interest in the relationships between body, brain & behavior
• Considering medical school or graduate studies in a related field
• Combination of Psychology and Biology?
• A fundamental curiosity about the mysteries of the brain
Now, as humans, we can identify galaxies light years away. We can study particles smaller than an atom, but we still haven't unlocked the mystery of the three pounds of matter that sits between our ears. But today, scientists possess the capability to study individual neurons and figure out the main functions of certain areas of the brain. But a human brain contains almost 100 billion neurons, making trillions of connections. So Dr. Collins says it's like listening to the strings section and trying to figure out what the whole orchestra sounds like. So as a result, we're still unable to cure diseases like Alzheimer's or autism, or fully reverse the effects of a stroke. And the most powerful computer in the world isn't nearly as intuitive as the one we're born with.

- President Barack Obama on the BRAIN Initiative
What can you do with Neuroscience?

• Medical School
  – University of Chicago
  – ... many, many others!

• Graduate School in Neuroscience
  – U Penn
  – Princeton
  – Boston University
  – ... many, many others!

• Positions that require analytical problem solving skills and natural curiosity!
General Info

• Two Departments:
  – Biology
  – Psychology

• Two Options:
  – Course Special Major
  – Honors Special Major

• Three “styles”:
  – Bio-heavy
  – Psych-heavy
  – Pretty equal

... prereqs come from BOTH departments, applications to the major are submitted to BOTH departments, you will be assigned (or can request) an advisor in the Dep’t that best reflects your plan of study
Pre-requisites (course and honors)

<table>
<thead>
<tr>
<th>Biology</th>
<th>BIOL 001: Cellular and Molecular Biology</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>BIOL 002: Organismal and Population Biology</td>
</tr>
<tr>
<td>Chemistry</td>
<td>CHEM 010: General Chemistry</td>
</tr>
<tr>

<tr>
<td>Psychology</td>
<td>PSYC 001: Introduction to Psychology</td>
</tr>
<tr>
<td></td>
<td>PSYC 025: Research Design and Analysis</td>
</tr>
</tbody>
</table>

All prereqs MUST be completed & GPA requirements met BEFORE being admitted to the Neuroscience Special Major. BUT:

- If you haven’t completed all, you can apply and be deferred until they are complete
- There’s some leniency in grades, especially during your first term and during COVID
NOTE about Prereqs... ~90% of Neuro Special Majors have NOT completed all of their prerequisites before applying for the major.

THIS IS EXPECTED! And totally normal. We will simply defer you from acceptance until you complete all prereqs. This has *no bearing whatsoever* on your standing in the major. You will have a neuroscience advisor. You will not miss out on opportunities.
In addition to Prereqs...

- At least 8 elective credits
- ...Including a Comprehensive Requirement (e.g., Neuroscience Thesis)

...for a total of a minimum of 10 credits for the major
Group A: Neuroscience Electives at least 5 credits

- (at least) 1 Foundation Course
  - PSYC 030: Behavioral Neuroscience
  - BIOL 022: Neurobiology
  [NOTE: As of 2020, BIOL 022 is only offered every other year...]

- Core Courses
  - BIOL: 020, 029, 030
  - PSYC: 031, 031A, 091

- (at least) 1 Group A Seminar:
  - BIOL: 121, 123, 124, 127, 129, 131, 134; PSYC: 032/132 (2 credits)
  - PSYC: 130, 131, 131A (1 credit)
  - PSYC 032/132 (2 credits)

... other courses may also qualify as Group A electives
Group A: Neuroscience Electives

<table>

<tbody>
<tr>
<td>BIOL 022</td>
<td>Neurobiology [Foundation Course*]</td>
<td></td>
</tr>
<tr>
<td>PSYC 030</td>
<td>Behavioral Neuroscience [Foundation Course*]</td>
<td></td>
</tr>
</tbody>
</table>

* At least one Foundation Course must be included. Both are recommended.

NOTE: THIS LIST IS OUT OF DATE; please see the neuroscience website for the correct information...
Group B Electives: Courses in Related/Overlapping Areas

• BIOL: Genetics, Cell Biology, Omics, Devel Bio, Systems Bio, Evolution, and many Bio seminars
• CHEM 038: BioChem
• COGS 001: Intro to Cognitive Science
• CPSC: Intro, Bioinformatics
• MATH 056: Modeling
• PSYC: Cog Psych, Psych of Language, Social Psych, Clinical Psych, Developmental Psych, Computing for Psych, & several Psych seminars

Technically, there is NO Group B requirement for the major!
Group C: Research Electives

- BIOL 098: Neuroscience Thesis Research
- PSYC 096/097: Senior Thesis
- PSYC 099: Senior Neuroscience Thesis
- PSYC 102, 103, 104, 105, 110: Research Practica

Perception & Cognition, Behavioral Neuropharmacol, Mind & Language, Psych & Neuroscience, Cog Neuro

Technically, there is NO Group C requirement for the major! BUT... most options for the Comp Req will draw from Group C.
Comprehensive Requirement

The comprehensive requirement is a *Neuroscience Research Thesis*, a complete scientific paper based on a research project conducted in Biology or Psychology or some other area related to neuroscience. Typically completed by:

1. Group C Elective, or
2. Separate Research Project (e.g., completed over the summer or as part of a BIOL seminar)
Comprehensive Requirement (Ex.)

Research Practica:

Perception & Cognition (PSYC 102, Durgin):
Comparing ERPs for metaphors and similes (turned into a neuroscience thesis)

Behavioral Neuropharmacology (PSYC 103, Schneider):
Propranolol as a potential adjunct to exposure therapy in the treatment of pathological fear memory: an animal model
Preventing recovery of fear memory following exposure therapy: reconsolidation versus prediction error

Psychology & Neuroscience (PSYC 105, Norris):
The Role of Intergroup Bias in Visual Perspective Taking
Gait Synchrony & Social Cooperation
Imitation Fails to Improve Emotion Recognition
The Effects of Posture and Mimicry on Perceptions of Warmth & Competence
Senior Thesis Research in Psychology:

Eliminate the Negative, Accentuate the Positive: Investigating the Effects of Emotion Regulation of Ambivalence (Norris)

It's not what you said, it's what you didn't say: How comprehenders use context to model alternative speaker utterances in pragmatic inferencing (Grodner)

Meditation & Attention: Can a single session of mindfulness meditation temporarily improve attentional control in naïve college students? (Norris)

Perceptual biases and comparison biases in noisy 2D orientation displays (Durgin)

Rigidity in adults with ASD when establishing common ground during a referential communication task (Grodner)

There’s nothing wrong with being a little dense: Density drives visual aftereffect of number (Durgin)
Senior Thesis Research in Biology:

Novelty induces behavioral and glucocorticoid responses in a songbird artificially selected for divergent personalities (Baugh)

Short-term chemosensory-mediated memory deficits in *Drosophila melanogaster* with targeted mushroom body inactivations (Siwicki)

Aggression effects on sleep in *Drosophila melanogaster* (Siwicki)

Characterization of rippling behavior and effects of light exposure in *Drosophila melanogaster* larvae (Siwicki)

The effects of cholesterol absorption inhibition on the dietary preference of saturated versus polyunsaturated fatty acids in Djungarian hamsters (*Phodopus sungorus*) (Hiebert Burch)

The effect of caloric restriction and stress on binge eating in estrogen-treated Djungarian hamsters (Hiebert Burch)
Neuroscience Honors Major

• Fulfill all the requirements for Neuroscience (1 foundation, 4 other group A credits) including...

• Complete 3 2-credit preparations - to include at least 1 BIOL and 1 PSYC prep, and at least 1 (normally 2, 1 BIOL/1 PSYC) Group A seminar:
  • BIOL: Seminar + prereq = 2 credits
  • PSYC: Core course/Seminar Combo = 2 credits

• Complete an Honors Thesis (BIOL 180 for 1 or 2 credits or PSYC 180 for 2 credits)

• For special majors, there is NO Honors Minor (all four honors preps are in Neuroscience).
Brandon Bastien (2017): The Waiting and Mating Game: Condition Dependent Mate Sampling in Female Gray Treefrogs (*Hyla versicolor*)

Emma Close (2018): Do food stimuli distract and/or focus attention for chronic dieters? An ERP Investigation

Abigail Dove (2016): Sleep plasticity due to sexual experience in *Drosophila melanogaster*

Olivia Leventhal (2018): ERP responses to non-binary uses of “they”

Caela Long (2016): Hormonal and molecular effects of restraint on formalin-induced pain-like behavior in male and female mice

Cecilia Paasche (2016): Metaphors make the brain work harder: An event-related potential study of extended metaphors suggests depth of processing advantage to figurative language

Makayla Portley (2018): A new elbow in the number perception function: Number processing changes at 20

Fran Reckers (2018): Friend or Foe?: The Effects of Friendship on Emotional Responses to Paired Gamble Outcomes

Rebecca Senft (2015): Distribution and Abundance of Glucocorticoid and Mineralocorticoid Receptors throughout the Brain of the Great Tit (*Parus major*)

Elisabeth Tawa (2015): What’s the right (hemisphere) way to think about metaphor?

Yuhao Xu (2017): Intuition or Deliberation? An ERP Study of Cooperative Decision Making
What do YOU need to do now?

- Request an advisor for sophomore planning
- Complete the Prereqs
- Think about your Sophomore Plan:
  - How do you plan to complete the major? When are the courses you want to take being offered?
  - How do you plan to complete the Comprehensive Requirement? (If NOT a Research Practicum, then start reaching out to professors early to talk about a plan for doing research.)
Next Steps

- Monday, Mar. 1 – Deadline to indicate your intended program (majors/minors) through mySwarthmore.

- Thursday, Mar. 4 – See Sophomore Plan advisor in the Majors and Minors section in mySwarthmore. - I will have office hours...

- Monday, Mar. 8 – Deadline to draft your sophomore plan for initial review

- Monday, Mar. 8 - Wednesday, Mar. 17 – Meet individually (as needed) with faculty advisor to develop/review plan.

- Thursday, Mar. 18 – Deadline to submit your sophomore plan.
